

AA236B: Spacecraft Design Lab

Zac Manchester

Winter 2019

Course Description

Spacecraft design is a truly interdisciplinary subject that draws from every branch of engineering. This course is the laboratory component of AA236 in which students engage in focused hands-on design, fabrication, and testing of small satellite subsystems.

Instructors

Prof. Zac Manchester **Email:** zacmanchester@stanford.edu **Office:** Durand 267
CA: Walter Maier **Email:** wmaier@stanford.edu

Course Objectives and Learning Outcomes

The goal of this course is to give students hands-on experience designing and building small spacecraft subsystems and integrating them into a CubeSat. Throughout this course, students will:

1. Design subsystems to meet system-level engineering requirements.
2. Work with a small team to fabricate and test spacecraft subsystems.
3. Coordinate with other teams to integrate subsystems into a complete spacecraft.

Logistics

The course will involve designing and building hardware in small teams. There will not be regular lectures. Class time will be used for weekly team meetings and consulting time for teams to meet with the instructors.

- Class will be held from 4:30 to 6:20 on Monday and Wednesday in Skilling.
- Attendance of weekly team meetings with the instructors is mandatory.
- Slack will be used for coordination between teams and instructors. All students will be added to the "SpacecraftDesignLab" slack channel.
- GitHub will be used to manage project files for all teams.

Assignments and Exams

There will be no exams in this course. Evaluation will be based on participation, contribution to design and fabrication work, and a final report from each team documenting their final design.

Schedule

Week 1: Team Formation / Introduction

Week 2: Subsystem Requirements Definition

Week 3: Preliminary Design Review

Week 4: Component Purchases

Week 5: Subsystem Fabrication

Week 6: Subsystem Fabrication

Week 7: Subsystem Fabrication

Week 8: Subsystem Testing

Week 9: System Integration

Week 10: System-Level Testing

Grading

Grading will be based on:

- 40% Participation and attendance of team meetings
- 60% Completeness, consistency, and quality of the design project

Stanford's grading system is defined by the Faculty Senate as A=Excellent, B=Good, C=Satisfactory, D=Minimal Pass, and NP=Not Passed.

References

There is no required text for this class. However, students may wish to refer to: *Spacecraft Mission Engineering: The New SMAD* by Wertz, Everett, and Pushcell.

Course Policies

Attendance: This is a team-based course. In order to coordinate work among teams, participation in weekly meetings is required. If you are unable to be present at a meeting, you must notify the instructors and ensure that your teammates are prepared to present your work.

University Policies

The Honor Code: It is expected that Stanford's Honor Code will be followed in all matters relating to this course. You are encouraged to meet and exchange ideas with your classmates while studying and working on homework assignments, but you are individually responsible for your own work and for understanding the material. You are not permitted to copy or otherwise reference another student's homework or computer code. If you have any questions regarding this policy, feel free to contact the professor.

Compromising your academic integrity may lead to serious consequences, including (but not limited to) one or more of the following: failure of the assignment, failure of the course, disciplinary probation, suspension from the university, or dismissal from the university.

Students are responsible for understanding the University's Honor Code policy and must make proper use of citations of sources for writing papers, creating, presenting, and performing their work, taking examinations, and doing research.

Accommodations: Students who may need an academic accommodation based on the impact of a disability must initiate the request with the Office of Accessible Education (OAE). Professional staff will evaluate the request with required documentation, recommend reasonable accommodations, and prepare an Accommodation Letter for faculty dated in the current quarter in which the request is being made. Students should contact the OAE as soon as possible since timely notice is needed to coordinate accommodations.
